

REACT :

Name: A. Tabasiya.
Batch: 8 to 10.

① What is React?

React is a JavaScript library developed by Facebook. It is used to build interactive and reusable user interfaces for web applications.

② Is React a library or framework?

React is a JavaScript library, not a framework. It mainly focuses on the UI part of web applications.

③ What is Component?

A Component is a reusable building block of a React application. It can represent a part of UI, such as button, form, navbar, or Card.

④ Why are Components important?

Components help to make the application reusable, organized, & easy to maintain. The same component can be used in multiple places.

⑤ What is JSX?

JSX stands for JavaScript XML. It allows us to write HTML-like syntax inside JavaScript. React uses JSX to describe the UI.

⑥ What is Virtual DOM?

Virtual DOM is a lightweight copy of the Real DOM. React uses it to find the changes.

In the VJ and update only the sequenced parts.

⑦. What is the Real DOM.

Real DOM is the actual structure of the webpages, created and maintained by the browser. Changes to the Real DOM can cause the browser to update the page.

⑧. What is Reconciliation?

Reconciliation is the process used by React to compare the new virtual DOM with the previous virtual DOM. It identifies the changes and updates the sequenced parts of the Real DOM.
